

Welcome to ACG 2015!

The Premier GI Clinical Event of the Year!

Dear Colleagues,

Welcome to ACG 2015 ACG's Annual Scientific Meeting and Postgraduate Course, the premier GI clinical event of the year. The Postgraduate Course Directors and ACG's Educational Affairs Committee, along with the Friday Course Directors, have brought together internationally recognized experts and rising stars in the field. This year's program promises to deliver the latest clinical updates in gastroenterology and hepatology, plus discuss what is on the horizon that may impact your practice.

2015 was a record-breaking year for abstract submissions. You'll find more than 2,000 posters and oral presentations this year. Poster presentations open on Sunday beginning at 2:30 pm. Posters may be found in the Exhibit Hall. A popular activity for viewing posters is Poster Rounds with the Experts. Each day of the poster sessions, well-known experts will lead attendees around to posters of interest. This is a great opportunity to discuss posters, garner insight from the experts, and make new contacts with other attendees in a low-key, relaxed environment. Poster Rounds with the Experts run from Sunday through Tuesday.

In light of recent news and its impact on our patients and practice, the College has added a new symposium, CRE Infections in Endoscopy: What Happened and What Now? This symposium, to be held on Tuesday from 2:45 pm – 4:00 pm, will discuss duodenoscopy infections with CRE, infection control and safety in endoscopy, and offer ways to prevent CRE related infections in endoscopy.

Learn about the latest tools available and techniques from leading experts, when you visit the ACG Hands-on Workshop Center to participate in one of the many sessions offered free to all ACG 2015 attendees. You can pre-register for these sessions at the special Hands-on Registration desk at ACG 2015 Registration. Hands-on sessions are offered Sunday through Tuesday. Learn more on page 18.

Don't forget to attend the Exhibit Hall Opening Reception, on Sunday, October 18, from 3:15 pm – 5:00 pm, immediately following the Postgraduate Course. The largest social event at the meeting, it is a great opportunity to enjoy food and drink with colleagues and friends and to explore the Exhibit Halls in support of the meeting's sponsors.

In closing, I want to thank you for the opportunity to serve you this year as ACG President. Your support has made the College more successful than ever.

Sincerely,

Stephen B. Hanauer, MD, FACP
ACG President

Your work is saved each time you access the online test. The test is organized by organ system and includes 300 multiple choice questions, many with photos or videos. The test tracks your responses, indicates correct answers with detailed discussion and supporting references, and provides your overall/category scores. Complete the test with a minimum passing score of 70% and earn a maximum of 35 *AMA PRA Category 1 Credits™*. In addition, even after you've finished the test, you can continue to go back and review, re-read, and check on linked references for further study. \$99 for members; \$150 for non-members. Events for GI Fellows and Trainees

The American College of Gastroenterology is committed to serving the specific needs of GI trainees. The ACG 2015 Annual Scientific Meeting and Postgraduate Course include elements designed with this aim in mind. The College assists GI trainees as they prepare for their future in gastroenterology, offering focused discussions from gastroenterologists in a variety of practice settings, such as the Trainees Luncheon, Career Opportunities for Women in GI Luncheon, and the Navigating, Networking and Negotiating Your First Job Workshop. Plus, there is an opportunity for those in training programs to showcase their talents by competing in GI Jeopardy.

Navigating, Networking and Negotiating Your First Job Workshop

Friday, October 16 • 4:00 pm – 6:30 pm • Room 304AB

The Women in GI Committee is hosting a program geared towards senior GI fellows and junior faculty, addressing the specifics of both the private practice and academic job search. Discussions will focus on details of private practice versus academics, contract analysis, networking skills, negotiating skills, and work-life balance, for both men and women. Separate breakouts for small group discussions are planned. Dinner will be provided.

Advance registration is required and space is limited. *Visit the ACG Registration Desk for registration information.*

Career Opportunities for Women in GI Luncheon

GI Jeopardy: Buzz In for Your Training Program

Saturday, October 17 • 3:45 pm – 4:45 pm • Room 316C

ACG's favorite quiz show, GI Jeopardy, will be back again in 2015. To become a contestant, you must be a fellow-in-training, but all are welcome to attend the competitive final round, a spirited GI version of the television classic.

The competition began in July with a preliminary round open to all GI training programs. Groups of fellows took a 55-question online test on a variety of GI topics and diseases. The top five scoring teams from the online competition will be sending two-person teams to compete in front of a live audience.

Competing this year will be:

- Case Western Reserve University / University Hospitals Case Medical Center
- Icahn School of Medicine at Mount Sinai
- Ochsner Clinic Foundation
- UCLA Medical Center
- University of Washington

Last year's GI Jeopardy finalists were supported by more than 300

lively audience members giving the event a real game show atmosphere. Watch this year's teams as they match wits and compete for the chance to bring home the coveted GI Jeopardy trophy. Each member of the winning team will be awarded \$1,000 toward travel to the 2016 ACG Annual Meeting and Postgraduate Course in Las Vegas, in addition to the trophy which they can proudly display back at their home institution.

Following this presentation, small roundtable discussions will take place on topics including Academics, Hospital-Employed, Hybrid, and Private Practice.

Don't delay registering, as this luncheon sells out every year. The luncheon is available to all trainees in gastroenterology and hepatology, and has a fee of \$35. *Visit the ACG Registration Desk for registration information.*

The gorgeous Ko'olau Mountains, Kaneohe Bay and Mokolii Island provide a stunning backdrop to films and TV shows. There are often demonstrations, works of art, and Hawaiian performances in the courtyard. ACG's 2015 Educational Programs — Needs Assessment

Clinical gastroenterology continues to experience an ever-increasing array of options and advancements affecting both the diagnosis and treatment of gastrointestinal (GI) disorders. Gastroenterologists must stay abreast of the diagnostic and treatment options that are available for managing their patients and effectively utilize them while maximizing quality and safety.

The multi-faceted pressures of new and increasing scientific developments, pressures from payors and policymakers, and demands by more knowledgeable patients mandate that gastroenterologists find ways to constantly reevaluate the diagnostic techniques and treatment modalities used and mechanisms for delivery in their practices. Declining reimbursement, increased demand for measurement of quality, and an insufficient workforce also remain significant challenges for gastroenterologists and their practices. As a consequence, it is important to identify more efficient ways to obtain the latest scientific knowledge and institute scientifically sound therapy so that the highest quality of patient care can be maintained. This objective, regardless of the specific practice setting, is to guarantee that each individual patient obtains the treatment and service that is the best possible option for their specific needs.

The emphasis of ACG's educational efforts focuses on these advancements in diagnosis and treatment options, as well as on the policies, procedures, and guidelines gastroenterologists employ in the overall management of their practices. A primary CME educational program goal is to heighten the knowledge of clinicians and other health care professionals involved in GI patient care in all areas of management, with an emphasis on those conditions with increasing prevalence and those where management continues to present a challenge. Attention is also placed on advanced and improved endoscopic techniques and practice management tools that can increase gastroenterologists' efficiency and effectiveness in their daily practice.

Colon Cancer Screening

Colorectal cancer is the third most commonly diagnosed cancer among both men and women. Colon cancer incidence rates have declined over the last two decades and survival rates have increased. This likely relates at least in part to increased colorectal cancer screening and surveillance, which allows physicians to detect and remove pre-cancerous polyps or diagnose cancers at an early stage. Although these trends are moving in a positive direction, there remains a need to increase the number of individuals being screened.

The proper and timely use of existing as well as newer screening tests that may lead to prevention or early diagnosis of specific disease conditions is critical. Increasing the rate of patient participation in colorectal cancer screening and surveillance is also important. Furthermore, providing and quantifying indicators that define a quality colonoscopy, including bowel preparation quality and adenoma detection rates, especially in light of recent findings on the prevalence of flat lesions, is a need that affects gastroenterologists. In addition, it is important that gastroenterologists understand the importance of grading bowel preparation using a validated scale, and that they are familiar with recommendations for the timing of a repeat colonoscopy in exams with inadequate bowel preparation.

There is also a need to recognize the potential role that the gastroenterologist plays in minimizing the occurrence of interval cancers. This includes the use of split-dose preparation in their practice as well as the use of proper polyp resection technique. The serrated pathway, which may account for at least 15% of all colorectal cancers, requires gastroenterologists to understand the challenges in detection, resection, and pathological interpretation and classification of these lesions. To aid in surveillance of serrated polyps, gastroenterologists should be aware of an expert panel's recent recommendations: Guidelines for Colonoscopy Surveillance After Screening and Polypectomy: A Consensus Update by the US Multi-Society Task Force on Colorectal Cancer. There has also been a recent update to the surveillance guidelines that includes the addition of recommendations for certain serrated polyps.

There is also a need to educate the gastroenterologist on the recent published data that help support recommendations of previous versions of surveillance guidelines. This will hopefully serve to increase physician adherence to the guidelines. As the survival rates from these GI cancers continue to improve, the must continue educating gastroenterologists who provide ongoing care to these patients. This important and evolving educational need must be met in a way that touches on the impact of various forms of cancer on the overall health and quality of life of these patients.

Obesity

Obesity has drastically increased in prevalence in the United States, from less than 15% in the 1960s to over 30% at present. It has been predicted that if the rates continue at their current pace, by 2015, 75% of adults will be overweight or obese. Therefore, not only is it imperative for gastroenterologists to be knowledgeable regarding obesity prevention and treatment options, but it is also important that they understand the importance of patient education. Patient education is a necessity to improve compliance and to achieve desired treatment results. In those patients who undergo surgery for the management of obesity, information on the post-surgical complications has become increasingly important. Specifically, endoscopic techniques and management options in these patients can be a challenge. It is essential that gastroenterologists be familiar and up-to-date on endoscopic techniques in this challenging group of patients. These topics, as well as the latest information on what GI conditions are linked to or exacerbated by obesity, have been requested as areas of further education by practicing gastroenterologists.

IBD

Inflammatory bowel disease is an area of gastroenterology that continues to see important developments in diagnostic and medical therapeutic options. The gastroenterologist must be fully aware of the latest developments in biologic and immunomodulator therapies including safety considerations and their place in patient management. In recent years there have also been many advances made in laboratory, radiographic, and endoscopic modalities that directly impact the diagnosis and management of inflammatory bowel disease and in the surveillance for dysplasia in ulcerative colitis and Crohn's colitis. Education regarding optimizing the use of such modalities is important to the practicing gastroenterologist. The post-surgical management of inflammatory bowel disease patients also continues to be a topic of great importance and one in which the clinician often faces challenges due to the complexity and unpredictability of the condition and the associated decision-making process.

Hepatology

Gastroenterologists are frequently faced with challenges related to liver disorders including hepatitis B and C, NAFLD, hepatic encephalopathy, cirrhosis, and autoimmune liver diseases. Often, the gastroenterologist relies on the expertise of the hepatologist to assist in the management of these patients; however, with hepatologists operating at capacity, the gastroenterologist must be able to offer the best quality of care and treatment options to patients with liver disease. With the increased incidence of NAFLD, practical and clinically relevant physician education is extremely important in this area.

Hepatitis C

Hepatitis C will be the most dramatically changing area of liver disease over the next few years, and there will be two major areas that will require focus and attention. First, HCV screening recommendations have shifted from the classic risk-based screening to an age-based screening. The CDC and USPFTS have recommended one-time screening of all persons born between 1945 and 1965. It will be essential that ACG and gastroenterologists educate primary care providers as well as patients about the need for HCV screening. Secondly, there has been a dramatic shift in the treatment of hepatitis C. Compared to the previous treatments, the current treatment regimens are dramatically more

ACG's 2015 Educational Programs — Needs Assessment

effective and have shorter lengths of therapy, and have dramatically fewer adverse side effects. Also, within the next 1-2 years, therapy will likely be completely all-oral, interferon-free, and perhaps even ribavirin-free. There will be a series of new regimens available, with new ones being introduced at a very rapid pace. Because there will be simple and effective therapies available, there will likely be more gastroenterologists who are willing to treat HCV. For this reason, ACG must work to educate gastroenterologists about the current and upcoming treatments. Also, with the expected rapid development and approval of multiple regimens, ACG must work to have a mechanism in place to allow rapid changes and/or addendums to HCV treatment guidelines.

Pancreaticobiliary

Pancreaticobiliary diseases can also be extremely challenging to manage, and can vary greatly in complexity and severity. Gastroenterologists play an essential role in both the evaluation and the management of patients with pancreaticobiliary disorders. Cystic neoplasms of the pancreas are more frequently diagnosed and management guidelines have been updated recently as our knowledge base continues to grow. Gastroenterologist offer highly specialized care for such patients, including advanced interventional endoscopic procedures. As endoscopic technology advances, patients are simultaneously becoming more complex, making it essential that gastroenterologists are up-to-date on these management techniques and strategies. Education on the diagnosis and management of various forms of pancreaticobiliary disease including pancreatitis, pancreatic cysts, pancreatic cancer, and biliary disorders is critical to obtaining the best patient outcomes.

Functional GI

Improvements in the understanding of the pathogenesis and treatment of motility and functional GI disorders continue to progress as research in this area expands. These disorders are among the most common GI disorders in the general population. Understanding the latest science with regard to these disorders and newer treatment modalities is critical to improving clinical outcomes and quality of life for a large group of patients who have been among the most difficult to treat. Understanding the potential role of enteric microbiota and inflammation in these disorders will also help determine the appropriate course of action and play a critical role in managing these challenging conditions.

Diarrheal disorders can prove to be challenging to diagnose and manage. Whether it be acute or chronic, caused by a malabsorptive condition, inflammatory, or infectious process, gastroenterologists must be aware of the various potential causes of diarrhea and the most appropriate corresponding treatment options. With the incidence and severity of *Clostridium difficile* infections increasing in recent years, this is yet another condition that demands close attention by the gastroenterologist.

GI Bleeding

GI bleeding remains one of the most common yet most challenging issues confronted by the clinical gastroenterologist. New anticoagulants have been released in the last several years, and this new class of drugs has made patients with GI bleeding even more difficult to treat. It is critical that gastroenterologists are frequently updated on these new medications as these patients may require different management strategies than those who are on traditional anticoagulants. Whether the GI bleeding is related to drug therapy, stress ulceration in the intensive care unit, anticoagulation, chronic liver disease, or obscure gastrointestinal bleeding, the gastroenterologist must be up to date on the latest information on strategies to prevent, diagnose, and optimally treat GI bleeding.

GERD

Gastroesophageal reflux disease is a common condition world-wide and affects 20% of American adults on a weekly basis. An understanding of its pathophysiology, diagnosis, treatment options, and complications is extremely important for the practicing gastroenterologist, and new guidelines have been published on reflux within the past year.

While less common, eosinophilic esophagitis appears to be increasing markedly in incidence and has been the subject of intense research leading to recent clinical guidelines. Esophageal dysmotility remains an ongoing challenge, and this field has dramatically changed in the past several years due to the adoption of new diagnostic modalities and an outpouring of outcomes data. This has been particularly significant for achalasia, which also has been the subject of recent consensus guidelines within the past year. Other upper GI conditions including Barrett's esophagus, dyspepsia, peptic ulcer disease, and *H. pylori* also require a clear understanding. It is important that published evidence-based practice guidelines for these upper GI conditions and many other identified GI disorders be available to the gastroenterologist for their explicit understanding and to enhance their ability to most effectively manage each of their patients. With guidelines published on gastroesophageal reflux disease, eosinophilic esophagitis, and achalasia within the last year, this has been an active area and this new information needs to be disseminated to the gastroenterology community.

Endoscopy

Rapid technological advancements in endoscopy and other diagnostic and therapeutic areas in gastroenterology creates a need to communicate the latest techniques and strategies for managing everything from patients with altered anatomy to identification and removal of large and difficult polyps to developing practice of natural orifice transluminal endoscopic surgery. Gastroenterologists in a variety of practice settings need to learn and integrate these new therapies into their practice in order to provide state-of-the-art services to their patients.

Quality

Finally, it is critical that gastroenterologists incorporate quality, safety, and service metrics into their clinical practice. In particular, quality and safety issues in the endoscopy suite need to be addressed in order to improve patient outcomes. Other quality issues dealing with specific disease states and their management in the office practice also need to be addressed by the practicing gastroenterologist. Practice efficiency is also of great importance as the demand for increased efficiency across all settings continues to drive the search for practical tools to positively impact care delivery and patient outcomes. Through the use of evidence-based approaches for treatment and rational public health policy, clinicians need to identify new and innovative ways to deliver care across the community. Ever-expanding access to information on a real-time basis by both clinicians and patients provides unique opportunities as well as challenges to the healthcare delivery system. When this is combined with the pressures associated with increased spending on healthcare in an environment currently trending toward decreased reimbursement and inadequate rewards for the physician who spends more time with the patient, the importance of high-quality continuing medical education for gastroenterologists and their patients cannot be overstated.

Course Description

The challenges of quality patient care and optimal patient outcomes seem to increase exponentially from year to year through a combination of increased demand and burgeoning information/treatment options relating to disease guidelines, disease management recommendations, and the introduction of new pharmacotherapeutic agents and devices. The clinical gastroenterologist needs to build on his or her educational foundation regarding GI anatomy and disease states that lead to their board certification and recertification while distilling the essence of new information and integrating it into their day-to-day practice. The requirement for recertification has posed an educational challenge for board-certified gastroenterologists who are trying to balance the management of their practice with their educational needs. The primary purpose of the ACG Recertification Course is to facilitate completion of an ABIM-approved medical knowledge module, developed by ACG.

Using a new ACG module approved for self-evaluation of medical knowledge credit toward ABIM Maintenance of Certification (MOC), faculty will answer and discuss all of the questions covering key areas of gastroenterology; audience participation is encouraged. The cases and questions will be presented and the answer options will be described. Course attendees will utilize an audience response system to choose which option they believe to be the correct answer, and these anonymous responses will be shown. The faculty member will then identify the correct answer, provide the basis for the selection and explain why the other options were incorrect. Participants will be able to complete their answer sheets for this module during the session.

Program Objectives

Upon completion of this program, attendees will:

- Learn the scope of the substantive areas in organ systems and disease management that they will need to be fully conversant in to successfully complete the exam.
- Obtain a clear understanding of the most effective test taking approaches.

Accreditation

The American College of Gastroenterology is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

The American College of Gastroenterology designates this live activity for a maximum of 2.5 *AMA PRA Category 1 Credits™*. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Attendee Requirements

2015 ACG Recertification Preparation and Update Course registrants will receive complimentary access to ACG's Self-Assessment Program for Maintenance of Certification – 8th edition (2015). Attendees enrolled in the ABIM's MOC program who successfully complete this 30-question ACG module with a minimum passing score of 70% will be awarded 10 self-evaluation of medical knowledge points by ABIM. Participants must be enrolled in ABIM's Maintenance of Certification program to receive MOC credit for completion of this module.

Attendees will be provided a copy of the module questions for note-taking purposes. All additional educational materials for the program are provided through the online module: detailed written explanations, linked references, and videos of expert discussions and slides from the course.

Program Description

With the need to remain abreast of the many new and emerging advancements in the field of gastroenterology and the volume of patients continuing to increase as the population ages, the clinical gastroenterologist is more challenged than ever to deliver the best patient care in each situation they encounter. Research in a multitude of gastroenterology and hepatology areas progresses at a rapid pace. Advances in technology, diagnostic modalities, and therapeutic options have had a positive impact on the management of many GI diseases. Scientific education, based on critical foundational knowledge and clinical skills, the communication of practical methods for treatment, and the ability to integrate the newest tools in diagnosis with the latest therapeutic/treatment options, are key necessities for the GI clinician to deliver top-quality patient care. This course will provide updates on a variety of gastroenterology and hepatology subjects including esophagus, colon, endoscopy, chronic disorders, luminal GI disease, liver disease, pancreaticobiliary disease, IBD, GI infections, personalized medicine, functional GI disorders, and GI emergencies. Expert faculty will deliver scientific presentations in a variety of formats. Didactic lectures, followed by interactive question and answer sessions, small group learning luncheons, and a choice of simultaneous sessions on the latest topics in GI and liver clinical care will be offered.

**PG+MOC

Annual Scientific Meeting

Monday through Wednesday, October 19 through 21, 2015 • Kalakaua Ballroom

Join GI physicians from around the U.S. and the world for the ACG Annual Scientific Meeting. The meeting promises to deliver the latest clinical information on timely topics in gastroenterology. As an ACG member, you can attend the three-day Annual Meeting for free – there is no registration fee. Choose from 10 symposia, multiple networking events, and see the latest advances in technology and therapeutics from exhibitors from around the globe. Additional breakfast sessions, 16 in total, will be offered for a nominal fee. Register today!

Be sure to visit poster presentations in the Exhibit Hall on Sunday, October 18th beginning at 2:30 pm (the Exhibit Hall opens at 2:00 pm), and enjoy the Opening Reception in the Exhibit Hall beginning at 3:15 pm on Sunday.

Program Description

The field of gastroenterology and hepatology continues to see advancements in areas relating to diagnostic measures, therapeutic options and technology. To provide appropriate and top-quality patient care, the clinician is challenged to stay abreast of the changes and advancements affecting the management of many gastrointestinal and liver disease states. Throughout the three-day Annual Meeting, you will be exposed to updates in a variety of topics, including hepatitis C, quality colonoscopy practices, IBD therapies and management, IBS treatment, PPIs, cirrhosis, challenges in screening and surveillance, Barrett's esophagus, and more.

Ten scientific symposia will allow attendees to hear lecture presentations from experts and to participate in interactive question and answer sessions with the faculty. In addition, 16 optional scientific breakfast sessions will be offered, where a smaller setting allows for heightened interaction with the speakers and greater audience involvement. Many sessions will use expert panel discussions in debate and case-based formats.

Returning this year is the Endoscopy Video Forum, "Live from Honolulu! The 3rd Annual Endoscopy Video Forum." The Forum will feature the best video presentations submitted from

colleagues from across the U.S. and around the world. Submitted during ACG's call for abstracts process, and peer-reviewed and selected for presentation, the cases will feature endoscopy techniques, challenging or unique cases, and cases in the area of GI endoscopy. During the session, the audience, along with the judges, will vote to select the best video of ACG 2015.

The Annual Scientific Meeting program is designed primarily for physicians in gastroenterology and hepatology, as well as physician assistants, nurse practitioners and other advanced practice healthcare professionals interested in the latest information on state-of-the-art treatment of these illnesses.

Paper/Poster Disclosures

The American College of Gastroenterology (ACG) is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians. ACG, as an ACCME accredited provider, ensures balance, independence, objectivity, and scientific rigor in all of its directly and jointly provided education activities. All who are in a position to control the content of an education activity (including their spouse or partner) are required to disclose to ACG all relevant financial relationships in any amount occurring in the past 12 months with any commercial interest that may create a conflict of interest related to the subject matter of an education activity. Safeguards against commercial bias have been put in place by ACG. Anyone who refuses to disclose relevant financial relationships will be disqualified. ACG ensures any conflicts of interest are resolved before the educational activity occurs and discloses all relevant financial relationships to the learners prior to the beginning of an education activity.
