GI Societies Issue Updated Colorectal Cancer Screening Recommendations

The U.S. Multisociety Task Force (MSTF) on Colorectal Cancer has released two new recommendation documents providing you with a timeline for follow-up colonoscopy based on a patient’s initial exam as well as recommendations to ensure high-quality polypectomy.

The publications from the U.S. Multisociety Task Force — which is comprised of representatives of the American College of Gastroenterology, the American Gastroenterological Association and the American Society for Gastrointestinal Endoscopy — aim to improve colorectal cancer prevention and early detection.

Recommendations for Follow-Up After Colonoscopy and Polypectomy

For this publication, the U.S. MSTF reviewed their 2012 recommendations and provide an updated schedule for follow-up colonoscopy following a patient’s initial high-quality exam:

<table>
<thead>
<tr>
<th>Patient Description</th>
<th>Next Colonoscopy Schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patient has no polyps</td>
<td>Next colonoscopy in 10 years</td>
</tr>
<tr>
<td>Patient has 1-2 polyps &lt;10mm</td>
<td>Next colonoscopy in 7-10 years (instead of 5-10 years)</td>
</tr>
<tr>
<td>Patient has 3-4 polyps &lt;10mm</td>
<td>Next colonoscopy in 3-5 years (instead of 3 years)</td>
</tr>
<tr>
<td>Patient has more than 10 polyps</td>
<td>Next colonoscopy in 1 year (instead of 3 years)</td>
</tr>
<tr>
<td>Patient has serrated polyps</td>
<td>Review the publication for complete recommendations</td>
</tr>
<tr>
<td>Patient has advanced polyps</td>
<td>Next colonoscopy in 3 years</td>
</tr>
</tbody>
</table>

To review all MSTF recommendations for patient follow-up, review the full publication.

Recommendations for Endoscopic Removal of Colorectal Lesions

This publication provides best practices for the endoscopic removal of precancerous colorectal polyps during colonoscopy.

Best practices for polyp assessment and description
MSTF recommends macroscopic characterization of a polyp, which provides information to facilitate the polyp’s histologic prediction, and optimal removal strategy.

Best practices for polyp removal
The primary aim of polypectomy is complete removal of the colorectal lesion, and the subsequent prevention of colorectal cancer. If you encounter a suspected benign colorectal polyp that you are not confident to completely remove, MSTF recommends referral to an endoscopist experienced in advanced polypectomy for subsequent evaluation and management in lieu of referral for surgery.
<table>
<thead>
<tr>
<th>Patient has diminutive (≤ 5mm) and small (6-9mm) polyps</th>
<th>Recommend cold snare polypectomy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patient has non-pedunculated (≥ 20mm) polyps</td>
<td>Recommend endoscopic mucosal resection</td>
</tr>
<tr>
<td></td>
<td>Recommend snare resection of all grossly visible tissue of a polyp in a single colonoscopy session and in the safest minimum number of pieces</td>
</tr>
<tr>
<td></td>
<td>Recommend against the use of ablative techniques on endoscopically visible residual tissue of a polyp</td>
</tr>
<tr>
<td></td>
<td>Recommend the use of adjuvant thermal ablation of the post-EMR margin where no endoscopically visible adenoma remains despite meticulous inspection</td>
</tr>
<tr>
<td>Patient has pedunculated polyps</td>
<td>Recommend prophylactic mechanical ligation of the stalk with a detachable loop or clips on pedunculated polyps with head ≥20mm or with stalk thickness ≥5mm to reduce immediate and delayed post-polypectomy bleeding</td>
</tr>
</tbody>
</table>

**Best practices for surveillance**

MSTF recommends intensive follow-up schedule in patients following piecemeal endoscopic mucosal resection (lesions ≥ 20 mm) with the first surveillance colonoscopy at 6 months, and the intervals to the next colonoscopy at 1 year, and then 3 years.

To review all MSTF recommendations on polyp removal, review the [full publication](#).

**Task force members:**
- Joseph C. Anderson, MD, MHCDS, Dartmouth Geisel School of Medicine, Hanover, New Hampshire
- Carol A. Burke, MD, Cleveland Clinic, Ohio
- Jason A. Dominitz, MD, MHS, University of Washington Medicine, Seattle
- Samir Gupta, MD, MSc, University of California San Diego
- Tonya R. Kaltenbach, MD, MS, University of California San Francisco
- David A. Lieberman, MD, Oregon Health and Science University, Portland
- Douglas K. Rex, MD, Indiana University School of Medicine, Indianapolis
- Douglas J. Robertson, MD, MPH, Dartmouth Geisel School of Medicine, Hanover, New Hampshire
- Aasma Shaukat, MD, MPH, Minneapolis VA Health Care System, Minnesota
- Sapna Syngal, MD, MPH, Dana-Farber Cancer Institute, Boston, Massachusetts

The U.S. MSTF recommendations are published jointly in *Gastroenterology*, *The American Journal of Gastroenterology*, and *Gastrointestinal Endoscopy*.
